Medical devices directly from the manufacturer. For over 45 years.

Franz Mensch is an owner-managed family company in the second generation located in Buchloe in Germany.

For over 45 years we produce and trade worldwide with disposable articles, hygiene clothing and consumable articles for sensitive areas such as medicine and patient care.

Choose from a **wide full range** of products that exactly match your quality and price requirements. Whether disposable gloves or surgical coats: one supplier for everything.

Your main advantage: Franz Mensch delivers so reliably and fast like no one else. Because we have your desired items at **99% in stock**. You order comfortably your desired articles and we do the rest.

We see ourselves as an innovative and growing company with the ambition to continuously improve, to develop new innovative products and to produce and trade sustainably.

Our company is ISO 9001:2015 and FSC™ certified.

5 good reasons for medical devices from Franz Mensch

✓ Full range on disposable clothing

With around 900 products, Franz Mensch has a unique selection of consumable articles for staffs, patients and visitors. Your big advantage: You only need one supplier for all your needs. And if it should be more than the standard? With pleasure! As a manufacturer, we quickly turn your special requests into reality.

✓ 3 strong brands

HYGO STAR HYGONORM HYGO CLEAN

HYGOSTAR – innovative premium products that meet the highest standards and at the same time offer a good value for money.

HYGONORM – lighter quality, cheaper price. **HYGONORM** stands for standard products that are reliable and conserve your budget.

HYGOCLEAN – stands for high-quality products for complete hygiene. The cleansing products are suitable for the highly sensitive areas in hospital, operating room and nursing home.

✓ Favourable manufacturer prices

No matter which brand product you decide on: with Franz Mensch, the price-performance ratio is right. You benefit from permanently low manufacturer prices.

✓ Service

At Franz Mensch you buy more than just disposable clothing. Save yourself a lot of time and effort and benefit from a unique inclusive service. From storage via call orders and distance delivery to the complete logistics: we do it. Quick, reliable and convenient for you.

✓ Quality

Of course, our disposable products meet all the required standards. EN 455, EN 374 or Medical Devices Act: At Franz Mensch you receive certified goods.

PP, PE or viscose? The best disposable materials and what they can

PE = polyethylene

PE is very versatile and available in different thicknesses (micron). PE is hygienically tight, stretchy and tough. As a clothing, PE protects against liquids. Basically, there are three types:

- LDPE (low density PE): soft and flexible
- HDPE (high density PE): tear-resistant and stiff
- MDPE (medium density PE): stronger than LDPE, but more flexible than HDPE

CPE = chlorinated polyethylene

Chlorination makes PE more durable and stronger. It resists mechanical stress and wetness very well. Ideal as a strong sole for disposable overshoes.

PP = polypropylene

PP is a thermoplastic and acts as a nonwoven like woven fabric. PP nonwoven is breathable and comfortable. It provides light protection against liquids because splashes roll off. **HYGOSTAR** products are made of pure PP. They are particularly evenly woven and very tear-proof.

Nylon = very breathable synthetic fiber with extreme elasticity that adapts to every movement.

SMS = 3-ply material. Two layers of PP nonwoven enclose a layer of meltblown. SMS is particularly breathable, soft and comfortable.

Viscose = regenerated cellulose, which is processed into fabric. Viscose is extremely skin-friendly and the number 1 when it comes to comfort. Clothing made of viscose has a thermo-regulating effect. Your advantage: sweat is absorbed, less heat accumulation and a pleasant body climate.

Selection guide of materials

material	greatest advantage	waterproof	water-resistant (temporary)	breathable	food safe	comfort	durability	price
PE	liquid-tight	✓	✓	–	✓	–	✓	€
CPE	durable	✓	✓	–	✓	–	✓	€€

Nylon	very breathable	–	–	✓	✓	✓	✓	€€€
SMS	extra soft	–	✓	✓	✓	✓	✓	€€€
Viscose	wearing comfort	–	–	✓	–	✓	✓	€€€

Disposable gloves – Reliable when it matters

Hands are the main carriers for all kind of germs. Therefore, in hospitals and nursing sectors the hygiene of your hands is one of the most important protective measures. Single-use medical gloves always protect employees, patients and visitors. At the same time they save your hands from skin irritations and injuries.

It's worth it: buying gloves from a professional

In the field of disposable examination gloves Franz Mensch has an unique range which meets every demand. The challenge: to reconcile safety regulations, comfort and not least the price. We at Franz Mensch know that and have the right gloves especially for medical areas.

Certified quality for highest protection

All gloves from Franz Mensch subject to strict quality controls and are regularly certified accordingly. Of course, our gloves are also tested according to the new PPE directive.

You can rely on:

- EN 374: protection against chemicals and micro-organisms
- EN 455: standard for medical examination gloves
- EN 420: general requirements for protective gloves
- MPG – Medical Devices Act (93/42/EWG) and from May 2020 valid according to the Medical Devices Regulation (EU) 2017/745 (MDR)

Wall mounts and dispensers

For an unbroken hygiene system use the suitable dispensers for disposable gloves from Franz Mensch. This way you ensure a hygienic and time-saving removal.

Your choice of materials

- nitrile: particularly skin-friendly; first choice when it comes to disposable gloves
- latex: very elastic, fits like a second skin

Caps and face masks – Safety for employees and patients

Headwear such as surgical caps are standard in medical areas. Because in order to keep all processes hygienic, scalp and hair must be safely covered.

Caps by Franz Mensch are:

- hygienic
- a reliable protection against contamination
- suitable for medical areas
- skin-friendly and latexfree
- comfortable, breathable and soft

Different materials

Caps made of PP nonwoven – This standard product is universally applicable. At Franz Mensch you will find a huge selection of shapes, colours, sizes (extra small or extra large in diameter), price and quality classes.

Caps made of viscose keyback – Premium products for highest wearing comfort. Viscose absorbs sweat and ensures less sweating and a pleasant head climate, especially during long periods of wear.

Surgical masks and face masks

Breath and saliva transfer smallest particles – a risk for hygiene-sensitive areas. Experts speak of a droplet infection. With a suitable mask you are always right and prevent contaminations.

Excellent filtration performance and a high wearing comfort characterize the surgical masks from Franz Mensch. They meet the requirement of the EN 14683 for surgical masks and offer a reliable protection against infections for employees and patients.

Wall mounts and dispensers

Close to hand and hygienically stored: For more hygiene use the suitable dispensers for disposable headwear and face masks.

Body protection – Your selection of disposable protective clothing

Disposable clothing from Franz Mensch ranges from lightweight aprons that serve as hygiene and moisture protection to surgical gowns that protect against infections and biological hazards.

Fit and materials are specially designed for daily use in hospitals and nursing homes. Comfortable cut and skin-friendly materials provide freedom of movement and high wearing comfort.

Your selection:

- disposable aprons: protection against liquids and splashes, great for short operating times in nursing and hospital
- isolation and examination gowns with high protection level against infections
- breathable surgical gowns made of comfortable materials like SMS or spunlace
- disposable scrub clothing made of SMS: particularly for hospital employees
- opaque patient gowns, examination pants and disposable patient clothing

Tip: Disposable clothing in a finished kit

Protection kits consist of a complete protective clothing – from head to toe.

Your advantages:

- Nothing gets forgotten. You have a complete set of gloves, head protection, coats and overshoes.
- immediately ready for use, without preparation time
- hygienic individual packaging for each kit

Foot protection – Overshoe machines and overshoes

Wearing overshoes is one of the most important measures against impurities (loose dust, dirt, infections) in hygiene-sensitive areas.

Franz Mensch provides you a big selection of disposable overshoes: from very favourable ones up to grippy overshoes to walk safely on smooth and wet floors. Especially for the application in medical areas you find here in the assortment overshoes made of breathable materials.

Experts recommend: Overshoe machines

Putting on overshoes is often annoying and quickly becomes a balancing act. The solution: Overshoe machines – for a simple but efficient hygiene system.

Overshoe machines are:

- hygienic
- universally applicable
- time-saving
- for employees, visitors and patients
- powerful
- economical

Within seconds the overshoe can be slipped on – without the user having to bend down. Overshoe machines like the HYGOMAT make the use of overshoes cleaner and more comfortable in all hygiene areas.

Especially hygienic is the fact that putting on the overshoes works freehand. This way you prevent another risk of contamination because the shoe will not be touched with the hands.

Hygiene with (colour) system

You can order the overshoes in many colours for a hygiene colour system. Each colour marks a different hygienic sector. This is how you easily differentiate between different staff or visitors.

Foot protection – overshoes for HYGOMAT

Anyone looking for a long-term hygienic solution for visitors and staff should work with overshoe machines. They are **fast, clean and comfortable** for the user.

The bestseller series HYGOMAT is particularly economical, favourable and has a huge range of suitable disposable overshoes. The overshoe machines are ideal for mobile use because they work without power.

Your advantages:

- **4 times faster** than putting on manually
- very user friendly, no stooping
- easy and fast handling, very quiet
- with handle to hold for even more comfortable donning
- extremely clean, because overshoe is not contaminated by touching it with your hands
- 100% hygienic, no cross contamination

Care supplies – Hygienic everyday aids

When it comes to patient care the hygiene and the control of infections have the highest priority. Franz Mensch works closely with partners from the medical industry and knows about the challenges in daily patient care.

The care supplies and consumables are especially developed to save valuable time, save limited budgets and of course to meet the high hygiene requirements.

Disposable articles by Franz Mensch are:

- hygienic
- time-saving
- economical

Customized range

At Franz Mensch you will find many selected consumables, specially tailored to the needs of hospitals, nursing care, rescue services and institutes for handicapped persons. From washing gloves, bibs and mattress covers over patient documentation to disposable beak cups. Perfect for everyday use in practice, clinic or care.

What you can rely on: All products are characterized by reliable quality, practical handling and the highest hygiene standards (MPG).

Innovation: Hygiene beak cup

The newly developed beak cup by Franz Mensch is more hygienic and noticeably cheaper than conventional returnable beakers. Both lids and cups are disposable and prevent cross contamination. Another advantage: The material mix of paper cup and PS lid is up to **70 percent more favourable** than standard plastic cups. Disposable beak cups are ready for immediate use without any preparatory steps such as rinsing and drying. Find out more on page 70.

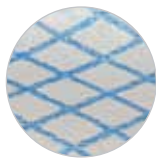

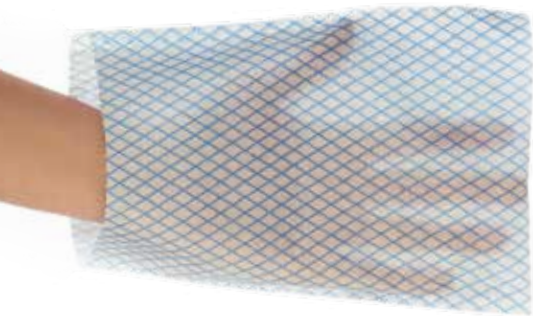

HYGO STAR

- **coated on the inside with PE, water repellent**
- very absorbent and pliant

23 x 16 cm
light blue 5341 PU/piece: 10 x 100

Innovation

Hygienic disposable feeding cup

The new feeding cup from Franz Mensch is more hygienic than conventional reusable cups. This innovation was developed together with a Munich hospital. Compared to reusable cups made of plastic the disposable feeding cup has three significant advantages:

- **more hygienic:** each cup and each lid is fresh, no cross contaminations
- **up to 70% more favourable:** paper cups and lids made of PS are significantly cheaper to purchase than conventional cups
- **more sustainable:** The paper cup is made of renewable raw materials (wood). The plastic lid can be recycled.

HYGO STAR

Disposable feeding lid | PS plastic

- **annoying rinsing and post-drying disappear**
- anatomically and pleasant shaped mouth opening
- drip-free and self-sufficient drinking for patients
- big opening – Ø 1 cm, for viscous food and drinks

for 0,3 l cup

Cleaning and disinfection – Effective against germs and infections

Franz Mensch offers you a wide and high-quality range of reliable and time-saving products – for hygienic cleaning as well as for disinfection.

Powerful brand HYGOCLEAN

HYGOCLEAN stands for high quality products for a continuous hygiene chain. The cleaning products are certified and suitable for the use in very sensitive sectors like hospitals, surgery and nursing homes.

HYGOCLEAN offers you everything you need for an effective cleaning of worktops, utensils and operating rooms. The range includes:

- wipes and cleaning cloths
- hygienic papers for washrooms and production areas
- products for hand care and hand disinfection
- dispensers and wall mounts

Long-term top conditions

No matter which brand product you decide on: with Franz Mensch, the price-performance ratio is right. Your price is even cheaper, if you use the saving scale. Order more items and get the best stagger price for ALL items.

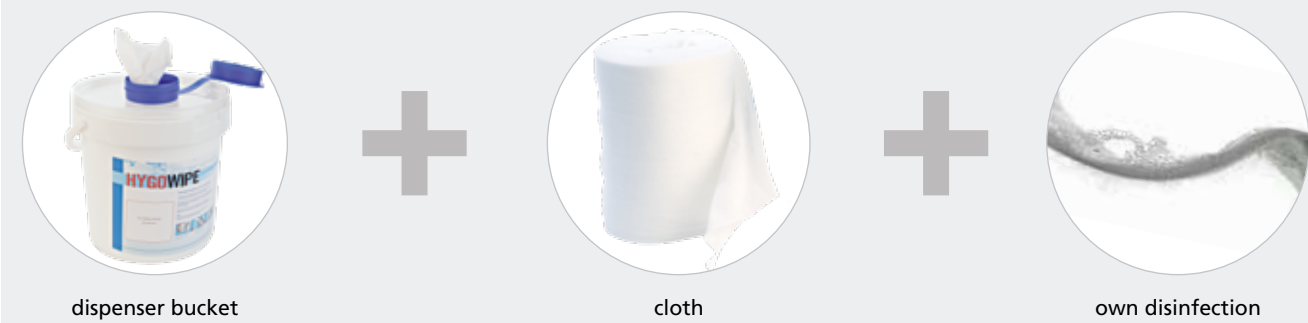

5 things you should know about disinfection

1. Disinfecting means germ stop. Unlike cleaning, pathogens are killed during disinfection.
2. Disinfection does not remove 100% of the germs. This is called a germ reduction. After disinfection, the quantity of active germs is so small that they can no longer spread.
3. Disinfection is only effective when hands, surfaces or instruments are completely wetted.
4. Disinfecting is more skin-friendly than washing. A good hand disinfection does not harm the skin flora and even cares for the skin.
5. Handle disinfectants carefully. Elmpact time, dosage and intended use must be strictly adhered to. This is the only way to obtain the desired germ protection.

Cloth HYGOWIPE PREMIUM | PET – art. 31552

Desinfection with a modular system!

The HYGOWIPE system consists of a dispenser that is filled with a nonwoven roll of cloths which can be torn off individually. It is a surface disinfection system for hygiene relevant establishments such as gastronomy, large kitchens, hospitals, laboratories or food processing businesses.

The advantage for you:

- good release of the agent to the surface
- for soaking with all surface disinfections
- refillable dispenser system

Tip:

The HYGOWIPE system can be filled individually. Franz Mensch offers you a wide range of cleansing agents and disinfectants. You will find them on www.franz-mensch.de.

The secret of success – the reason:

The HYGOWIPE is made of **100% PET fibres** (Poly-Ethylen-Terephthalat). In comparison to other materials, the wipe is outstanding and unique. The reason: no compared wipe has so many advantages concerning the reception and release of the disinfection lotion. After the filling of the dispenser, the nonwoven roll absorbs very quickly and completely. Afterwards, the practical disposable wipe distributes very well and equally the absorbed lotion – for a surface disinfection with constant perfect quality. The our **synthetic fibre PET** could also convince concerning possible mutual reactions between disinfection lotion and non-woven wipe – for instance for so called behaviour of adsorption. Adsorption means the adsorption of molecule of the disinfection lotion on fibres of the wipe. This should be avoided because the active ingredient will not be released optimally. Also in this case comparing examinations give clearly PET the advantage.

HYGO CLEAN
Cloth HYGOWIPE | PET

- **very absorbent, lintfree, tear resistant**
- cloth quality with textile character (100% PET)
- can be filled individually (surface disinfection/ cleaning substances), solvent resistant
- good delivery of the liquid
- very good absorption behavior
- economical in consumption, without wastage
- lotion soaked wipes useable within 4 weeks

Folding techniques

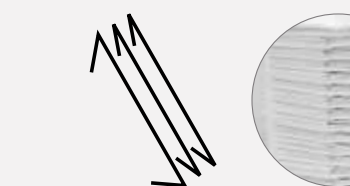

Interfold N/W-folded

Interfold N/W-fold are fully unfolded, ready to use wipes. Individual removal from the dispenser means that only one towel is touched. The sheet is removed unfolded and the next sheet is ready for removal. The paper is folded longitudinally, then the right and left sides are folded by half to the outside. The towels lie on top of each other.

V/Z-folded

V/Z fold are paper towels which can be withdrawn from the dispenser individually and deployed as a ready to use cloth. The sheet is removed unfolded and the next sheet is ready for removal. The sheet are folded in a Z configuration, as the name indicates. The towel is folded once in the middle and inserted inside the next towel in a concertina configuration.

C-folded

C-folded is a classic conventional folded towel. It is folded in a C shape. This special fold means that the towel is used either folded or unfolded. The towel is folded once longitudinally and then right and left folded to the middle. The folded towels are placed on top of each other. When removed from the dispenser, contact is made with the dispenser and the subsequent towels.

HYGO CLEAN

Hand protection

Hands have a very demanding job. They often have to withstand moisture, acids, detergents or even germs in the workplace – and still give their best every day. Franz Mensch has now included a unique hand protection system in its product range, to make sure that your hands are always cared for and protected and, most importantly, that they stay healthy. In this way you also fulfill all relevant regulations of the professional association with regard to worker protection. Hand protection is obligatory.

Skin care plan – „Healthy skin according to plan“

Protection		Cleaning		Care	
gloves	hand protection lotion	disinfect = protects from germ	washing = remove dirt		
wet conditions, moisture, acids, oils, bacteria, fungi or cleaning agents affect the skin	sweat eczema between the fingers, moisture and wet conditions due to long-term use of gloves	contamination by bacteria, viruses and fungi	dirt, personal hygiene	irritations, sore and dry skin	risk
wear protection gloves, depending on the intended use (skin and germ protection)	apply hand protection and barrier lotion before each use of gloves, additional effect on sore skin	use alcoholic hand / skin disinfection, it protects from germs	wash hands with mild detergent lotion	apply nourishing hand cream with soothing and moisturizing effect	this helps
	Hand protection F 	Hand disinfection 	Soft Neutral 	Hand care 	product
Choose the suitable gloves depending on the intended use, only wear them as long as necessary, change them often in case of long-term use. Advice: powderfree disposable latex, vinyl or nitrile gloves.	Apply on clean and dry hands, put on gloves, wash hands after work and apply caring lotion. Advice: According to the professional association (Berufsgenossenschaft) it is necessary to use hand protection when wearing gloves for more than 20 minutes.	Apply lotion (3-5 ml) before, after or between different work-steps and rub in for at least 30 sec. Don't save on lotion. Don't forget thumb, nails and between fingers, for the hygienic and surgical hand disinfection as well as in contact with food.	Apply a small amount of undiluted lotion after hand disinfection or if necessary, in between on moistened hands, foam up and rinse off.	Put on a small amount of lotion after work and after washing hands, use it sparingly!	instructions

HYGO CLEAN

Hand care cream

- **revitalizing care cream, soothes stressed skin**
- very mild and well tolerated
- is very quickly absorbed – saves time and can also be applied in between worksteps
- very economical and economical in consumption

0,5 litre bottle	31586	PU/piece: 6
1 litre bottle	31588	PU/piece: 2

HYGO CLEAN

Liquid soap SOFT NEUTRAL

- **with moisturizing effect, moisturizes the skin**
- neutral odour and is very well tolerated (Dermatest: very good)
- without fragrances or dyes
- high cleaning power even with a small amount – saves costs

0,5 litre bottle	31570	PU/piece: 12
1 litre bottle	31571	PU/piece: 12
5 litre canister	31573	PU/piece: 1

Clean Card PRO – Safe and clean in only 30 seconds

With the Clean Card the traffic light goes on **GREEN**

- 1) Preparation: Fill fresh drinking water (cold or room temperature) or distilled water in a spray bottle. Take Clean Card PRO out of the box, without touching the perforated part with the fingers.
- 2) Moistening: Moisten the surface with water from the spray bottle. Just spray two times.
- 3) Wiping: Rub strongly with the test card over the surface for several times. It's important to press the perforated part of the card strongly against the surface (abrasion). Make some circles and zigzag lines so the liquid can move into the testing field.
- 4) Analysis: Wait for 30 seconds and compare the colour of the test card with the analysis card enclosed. You also can use your own Clean Card tests to compare your tests with each other.
